

Your new anchor
rescue tool!

UltraMarine Anchor Ring

Brings two
unique functions
in one.

Designed to replace a chain or rope weight (Kellet). In case of anchoring with limited scope (busy anchorage or limited anchorage area), the Ultra Marine Anchor Ring increases safety by adding weight to the anchoring system. By adding extra weight on the chain, the Ultra Marine Anchor Ring reduces the vessel swing area and works as a shock absorber, improving comfort at anchor by reducing boat movement.

The Ultra Marine Anchor Ring will also be an important recovery tool. This is especially relevant in conditions where entering the water is not possible or preferable (such as cold water, rough sea conditions, or with dangerous wildlife around). In circumstances where you are unlucky and get caught on the bottom, using the Ultra Marine Anchor Ring will assist in your recovery prospects.

TYPE #	USABLE ANCHOR	USABLE CHAIN	INNER / OUTER DIAMETER	WEIGHT
	min-max		mm	kg
UAR 27	5-27	Ø6-Ø8-Ø10	138x220	8,20
